Mountain Weather Forecast

Southwest Highlands

Including Ben Nevis, Glen Coe and the rest of Lochaber, Argyll including the Isles, Loch Lomond, Trossachs and Arran
Forecast valid from 06:00 on Tuesday 23 Nov 2021 until 23:59 on Wednesday 24 Nov 2021

Forecast Issued on Tuesday 23 Nov 2021 at 03:19 by Met Office Aberdeen

Confidence: High confidence for a change to cold, wintry conditions and spells of strong winds over the forecast period. Lower confidence in the low pressure system on Friday and Saturday and the area of the strongest winds and also snowfall levels with significant accumulations of snow a possibility for some Lochaber ranges.

Headline for Tuesday 23 Nov 2021: Cloudy with a few, mainly light drizzly showers in the west, fresh or strong winds.

Mountain weather hazards on Tuesday 23 Nov 2021

Forecast for Tuesday 23 Nov 2021

Weather: Cloudy with some drizzly outbreaks at times, perhaps any turning wintry on the munro tops. Drier for eastern ranges around Crianlarich and the Trossachs and perhaps one or two brighter spells during the afternoon if the sun breaks through. Remaining cloudy during the evening period with more light outbreaks of rain especially around Lochaber and Argyll ranges.

Chance of cloud free mountain/hill tops above 800m: 30%, extensive low cloud for most ranges except for the south and east which may see more breaks, perhaps 50% here.

Visibility: Visibility will be poor for most of the day especially in the north and west where cloud bases will be from 400m and overcast above. In the east, cloud will be more broken with bases around 600m so there is the chance of some brighter spells here. Below the cloud, visibility will be moderate or good but turning poor in drizzly showers.

Met Office Aberdeen Meteorologist's View
Freshening westerly winds and a significant windchill in the cold airstream.

Forecast for Wednesday 24 Nov 2021

Weather: Dry for the first part of the night but a period of rain or hill snow around dawn with some heavier bursts for a time. Falling as snow above 800m. This band of precipitation marks the change to a very cold, showery airstream moving across from the northwest. Any low cloud will mostly clear around dawn with bright spells and wintry showers above 600m for the rest of the day. A real wintry feel to the day with significant windchill expected.

Maximum wind: Westerly 20-25mph with gusts 30mph initially becoming northwesterly 15-20mph with gusts 25mph during the afternoon.

Chance of cloud free mountain/hill tops above 800m: 50% in the west, 70% in the east. Low cloud in association with showers which may group together in the west but will be less frequent in the east.

Visibility: Periods of low cloud to 600m in the north and west, although if showers clump together there may be longer spells of poor visibility in wintry showers. It will be a very blustery day especially around snow showers. Further east, fewer showers are likely and these will be lighter but visibility still turning moderate or poor for a time and cloudbases falling to 700m.

Temperature: **Glens:** Plus 5 falling to 2 Celsius. It will be warmer in the early morning on Wednesday and temperatures will gradually fall during the day as cold air pushes south.
At 800m: Plus 1 falling to Minus 3 Celsius.
Freezing level: 900m falling to 600m.
